eXtractpro+

Launching eXtractPro Lite

Going with market trends, today many small/medium institutes and colleges require OMR solutions which have minimum features but work in rugged environment. TRS has come up with a new version of its powerful eXtractPro which can work on any sheets printed using deskjet printers used in most offices. There is no constraint on the paper quality. Also, during scan, the image quality can be as low as 50 dpi. The images can also be uploaded from a mobile camera with proper allignment. The software is simple and direct, therefore no special training is required.

OMR in numbers:

In one recent assignment, TRS processed OMR volumes of upto **1.5 million** for a large Public University in the State of Uttar Pradesh. This clearly outlines the power of eXtractPro.

TRS OMR Solution used by one of the largest private coaching institute in South India.

The coaching institute having presence in all the 5 Southern States, uses TRS hybrid OMR scanners to evaluate for all its internal tests and mock exams.

TRS OMR Hybrid scanners can be used to scan sheets at the rate of 80-100 pages per minute. For very high volumes, one can use high end scanners along with eXtractPro software running on the backend.

The OMR software of TRS is scanner independent. Hence, it gives power to the end user to customise his solution as required.

The software will be able to handle circular, oval and square boxes and is capable of reading both pen and pencil marks from both colour and grayscale images. It takes care of deskewing tilted images and also crops images, address fields automatically if needed. The software is also designed to read 1D,2D barcodes (QR codes) and Lithocode from the answer sheet. At high speeds, the software can recognise 15,000 images per hour.

The template definition module is fully user friendly and it can accommodate all design layouts like '1248' format OMR response.

The said coaching centre has its locations across the five Southern States, and they neededs scanning power to process around 10,000 students per test. They conducted more than 100 such tests all through the year. Currently they are using TRS hybrid OMR scanners in 4-5 locations to scan and provide results to their students.

TRS provides software to end users with no limit on process volume. So institutes can use the software life long without any recurring costs. Support from TRS is available on call within 24-48 hours.

For fully functional demo versions of the software, please contact:
